INSIDE THE TECHNOLOGY

Structural Color

Structural color occurs when different wavelengths of light are amplified or weakened by the structure of a material itself, expressing colors other than what the material may actually be. From morpho butterflies to peacocks, some of the rarest and most beautiful colors in nature are the result of structural color.

Smart Chromatic Technology

Through the utilization of Tokuyama’s spherical fillers and Smart Chromatic Technology, OMNICHROMA is the first use of structural color in composite dentistry.

OMNICHROMA’s structural color mechanism is made possible by the precise shape and size of the filler within the composite. The 260nm identical spherical fillers of OMNICHROMA are the perfect size and shape to produce the effects of structural color to match the surrounding tooth color.

FEATURES & BENEFITS

• Unprecedented shade-matching ability and esthetics
• Exceptional handling, polishability, and strength
• Shade matches both before and after bleaching
• Reduction of inventory and expired composite
• Minimized chair time and reliance on shade-matching procedures

ONE-SHADE OMNICHROMA PRODUCTS

• Unprecedented shade-matching ability and esthetics
• Exceptional handling, polishability, and strength
• Shade matches both before and after bleaching
• Reduction of inventory and expired composite
• Minimized chair time and reliance on shade-matching procedures

**OMNICHROMA®**

The culmination of 35 years of research and development, Tokuyama Dental is proud to present OMNICHROMA, the world's first dental composite that matches every tooth with a single composite shade.

**Color and Composites**

All smiles have something in common, and that is the colors that make up human teeth shades. From A1 to D4, all shades of teeth express a narrow range of red-to-yellow color.

To match every smile, most composite brands require multiple shades. That's because most composites today depend on the color of red and yellow dyes added to the resin material to emulate tooth shades. This means that dentists must keep a large inventory of different composites to accommodate a variety of patients.

**OMNICHROMA Changes Everything**

OMNICHROMA is the first universal composite that offers one shade to match all patients. The red-to-yellow structural color generated by OMNICHROMA combines with the reflected color of the surrounding tooth and creates the perfect match for almost every patient.

**Just One Shade for Every Patient**

- No more shade selecting needed
- No more excess product for incidental shades
- No more wasted composite

**Most Clinical Cases**

OMNICHROMA uses a standard universal procedure. The paste is opaque-white before curing, allowing for higher visibility and easier placement. After curing, it becomes naturally in appearance and matches the color of the surrounding tooth.

**Color and Composites**

Just One Shade for Every Patient

- No more shade selecting needed
- No more excess product for incidental shades
- No more wasted composite

**Cases with Limited Tooth Structure**

In large Class III and IV cases, OMNICHROMA may experience shade-matching interference due to a lack of surrounding dentition. OMNICHROMA BLOCKER is a supplementary material to be used in conjunction with OMNICHROMA as a lingual layer to prevent shade-matching interference in these cases. OMNICHROMA BLOCKER can also be used to mask slight staining, or to reconstruct a highly opaque tooth.

**OMNICHROMA BLOCKER can also be used to mask slight staining, or to reconstruct a highly opaque tooth.**

**OMNICHROMA BLOCKER can also be used to mask slight staining, or to reconstruct a highly opaque tooth.**

**Minimal Wear**

OMNICHROMA excels in minimal wear in both the composite itself and in opposing dentition, resulting in long-lasting restorations.

**Esthetics**

OMNICHROMA produces extremely glossy results and maintains its cured color very well, resisting the effects of staining on its appearance.

**High Strength**

OMNICHROMA’s compressive and flexural strength is equal to or exceeds other commercially available composites, assuring dentists that patients can bite with confidence.
