Anterior Direct Bonding Series
New: Pre-Fab Veneers 2017 (Uveneer)
Saturday October 7, 2017 & Friday/Saturday November 3-4, 2017

Esthetic Professionals Dental Education Center in Tarzana, California is proud to have Dr. James Peyton, a recognized expert in Direct Anterior Bonding techniques and one of only a handful of fellowship level members of the American Academy of Cosmetic Dentistry share his knowledge and expertise. Anterior direct bonding is one of the most difficult techniques to master in esthetic dentistry. Anterior direct bonding requires an understanding of materials and smile design along with individual esthetic artistry in order to achieve optimal results.

The program will provide a unique step-by-step technique approach to anterior direct bonding. This program is designed for any dentist who wants to elevate their skill level in anterior direct bonding and predictably provide esthetic class IV restorations, diastema closures, and bonded facial veneers. Esthetic Professionals Dental Education Center has divided this program into two parts. The focus of Part I will focus on the class IV restoration and diastema closure (Bonus: Posterior Composite Update 2017). Part II will be on bonded facial veneers (Bonus: pre-fab veneers). After this program, each participant will be able to effectively perform these procedures in their practice. It will also provide the foundation of knowledge to start preparing for accreditation in the American Academy of Cosmetic Dentistry.

Topics:
- Contour: the foundation of esthetic dentistry
- Diastema closure, class IV fracture
- Esthetic Bonded Veneers
- Techniques to achieve optimal results
- Basic tooth anatomy
- Material alternatives and comparisons
- Color, translucency, layering
- Unique techniques to simplify direct bonding
- Instrumentation
- Tooth preparation
- Surface texture, finishing, and polishing
- Practical advice for practice integration and maximizing profit
- AACD candidates get advice from our accredited faculty
